01 Executive Summary

JSW Energy Reports Strong Q2 FY26 Performance driven by Capacity Additions

JSW Energy Limited announced its financial results for the quarter ended September 30, 2025, showing significant growth in EBITDA and generation capacity, driven by organic renewable additions and strategic acquisitions like Mahanadi and O2 Power.

- Net Generation increased by 52% YoY to 14.9 BUs in Q2 FY26 from 9.8 BUs in Q2 FY25.
- Added 443 MW of organic renewable capacity during the quarter, bringing the total installed capacity to 13.2 GW.
- Reported EBITDA grew by 67% YoY to ₹3,180 Crore, while Cash PAT grew by 27% YoY to ₹1,512 Crore.
- Net Debt to Equity stood at 2.1x, and Cash & Cash Equivalents reached ₹6,181 Crore.

02 Investment Thesis

JSW Energy is rapidly expanding its green footprint, aiming for a total locked-in capacity of 30 GW by 2030, up from the current 13.2 GW. The company is also focusing on energy storage targets of 40 GWh. With a diversified profile across thermal, wind, solar, and hydro, backed by long-term PPAs, the company offers highly predictable cash flows. Strategic initiatives such as the acquisition of Tidong HEP and the boiler manufacturing partnership with GE Power India strengthen its domestic market leadership.

03 Outlook

The company has set clear goals under Strategy 3.0, aiming for a significant increase in generation capacity and energy storage. Currently, under-construction and pipeline projects represent 17.2 GW of potential capacity, ensuring a clear path to the 30 GW target by 2030. The commissioning of the 240 MW greenfield Kutehr Hydroelectric Plant in August 2025 showcases execution strength, completed in under six years despite external disruptions.

04 Risk Factors

Key risks include seasonal fluctuations in renewable energy resources (wind, solar, and hydro), fuel supply security for lignite and coal-based thermal assets, and execution delays in large-scale storage projects. Furthermore, dependency on state power distribution companies for receivables poses potential working capital pressures, although the DSO remains comfortable at 64 days.
